Mike Snyder
Senior Parks Planner

Columbia Parks and Recreation
Creating Community
The Citizens of Columbia value trails. Trails and trail related activities always lead in our scientific surveys of residents.
Q1. Leisure Activities in Which Respondents and Households Participate Regularly

By percentage of respondents

- Walking/jogging: 67%
- Biking: 59%
- Visit nature preserves: 54%
- Festivals: 52%
- Hiking: 48%
- Swimming: 40%
- Picnics: 38%
- Camping: 32%
- Arts/crafts: 32%
- Fitness/aerobic: 32%
- Fishing: 30%
- Weight training: 29%
- Softball: 22%
- Golf: 20%
- Hobbies: 20%
- Basketball: 19%
- Baseball: 19%
- Boating: 15%
- Dance: 14%
- Tennis: 13%
- In-line skating/hockey: 12%
- Bowling: 11%
- Skating/skateboarding: 11%
- Football: 9%
- Racquetball: 7%
- Gymnastics: 6%
- Equestrian/horse: 6%
- BMX racing: 0.2%
- Do not participate in any activities: 0.2%

Trail options for City Trail Master Plan

- Gravel
- Asphalt
- Concrete
Gravel trails

Bear Creek Trail

MKT Trail

Rock Quarry Park
Gravel Trails Pros and Cons

**Pros**
- Considered by some to be more natural looking.
- Good for flat areas out of flood plains.
- Softer on joints (running).
- Cheaper initial installation cost.

**Cons**
- High ongoing maintenance costs.
- Difficult to maintain consistent surface quality.
- Environmental damage caused by gravel erosion.
- More difficult to use in winter due to soft, wet and dirty conditions.
- Gravel migrates on steep trail slopes.
- Difficult to ride bikes on steep slopes and in loose gravel.
- Difficult to remove silt deposits after heavy rains.
- A dirty surface during and many days after rains.
- Very difficult to meet ADA surface standards.
- Less stability for running and walking in loose gravel.
Our trails flood regularly.
Bear Creek Trail during flood.
Ongoing Maintenance

Removing mud deposits after floods along the Bear Creek Trail.
Gravel wash out at Bear Creek Trail bridge.
Replacing rock after flooding along the MKT Trail.
Blowing leaf litter off the edge of the Bear Creek Trail.
Gravel build-up in natural areas after flooding.
Trail damage after flooding.
• We replace about 179 tons of gravel that washes into the adjacent creeks after every major storm event.
• On average over 1000 tons of gravel each year.
Compacted gravel with fines is not very pervious.
Dirty surface after rain events is hard on clothes and bikes.
Cosmo Park 12’ asphalt trail

Asphalt trails
Asphalt Pros and Cons

PROS
• Best initial surface (smooth, no cracks)
• Slightly cheaper than concrete in initial cost.

CONS
• Edges crack with vegetation. If you want a 10’ wide trail, you have to install a 12’ wide asphalt trail.
• Constant maintenance of crack filling and sealing with our clay soils.
• Must be completely overlayed approximately every 8-10 years.
• Little structural strength to span over soil problems below.
• Requires greater initial excavation (harming trees) to provide the required rock base depth.
• Impervious surface.
Asphalt Maintenance

Cracks appearing in first year even though the Cosmo Trail was built with 11” of gravel base.
Cosmo Trail required crack filling and sealing after only 2 years.
Asphalt settling where base failed on Lions-Stephens Trail.
Concrete work done at the same time as asphalt. Lions-Stephens Park 6’ wide asphalt trail.
The Cosmo Trail was well built with 11” of gravel base rock and has been well maintained, yet in 7 years it has major problems.
Concrete Trails

Stephens Lake Park 10’ concrete trail
Concrete **Pros** and **Cons**

**PROS**
- Best ADA surface long term
- Best longevity. Should last 20+ years.
- Best consistency of surface. Does not wash or break apart.
- Does not wash in flood areas or on steep slopes.
- Steel in concrete keeps it from deflecting preventing tripping hazards or barriers for wheel chairs.
- Cleaner surface during and after rains. Keeps commuters clean as well as less wear and tear on bikes.
- Does not require gravel base rock so impact on trees is less than asphalt.
- We don’t have to put tons of gravel in our creeks and natural areas every time it rains.

**CONS**
- More expensive (initial installation).
- Harder on joints (running).
- Less natural looking than gravel.
- Impervious surface.
Concrete trail in a natural setting.
Concrete provides a high quality surface for wheeled activities.
Concrete provides a high quality ADA surface.
Concrete requires no base rock so it requires less grading around existing trees.
15 year old concrete in perfect shape at Oakland Park 8’ trail.
Concrete does not require gravel base like asphalt.
Steel re-bar used in trails to prevent deflection and tripping hazards.
Concrete allows for a rolled curb to prevent a wheelchair from rolling down steep slopes.
Flat Branch Park during flood.
Debris deposited during flood can be easily swept off concrete.
This concrete has been under water multiple times.
Concrete currently utilized under bridges.
Most of our proposed trails are in the flood plain.
Annual cost to maintain a \( \frac{1}{4} \) mile of trail.

<table>
<thead>
<tr>
<th>Trail Type</th>
<th>Annual Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Concrete</td>
<td>$745</td>
</tr>
<tr>
<td>Asphalt</td>
<td>$2,168</td>
</tr>
<tr>
<td>Gravel (in non washout/flood areas)</td>
<td>$1,320</td>
</tr>
<tr>
<td>Gravel (in washout/flood areas)</td>
<td>$4,226</td>
</tr>
</tbody>
</table>
Why is staff concerned?

Currently Parks and Recreation maintains:

<table>
<thead>
<tr>
<th>Trail Type</th>
<th># of Miles</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hard Surface</td>
<td>5.54</td>
</tr>
<tr>
<td>Mountain Bike</td>
<td>2.40</td>
</tr>
<tr>
<td>Nature</td>
<td>11.27</td>
</tr>
<tr>
<td>Gravel</td>
<td>18.22</td>
</tr>
<tr>
<td><strong>Total Trail Miles Maintained</strong></td>
<td><strong>37.43</strong></td>
</tr>
</tbody>
</table>
Parks and Recreation Department has only one FTE employee for trail maintenance.
Creating Community through People, Parks and Programs
